

Sarah Johnson - ErgoEase Individual Ergonomic Assessment Summary

SAMPLE REPORT - FOR DEMONSTRATION PURPOSES ONLY

June 1, 2026

Ergonomic Score Overview

Overall Ergonomic Score

78 / 100 - Moderate Risk

Clinical Findings - Office Ergonomic Assessment

About This Ergonomic Score

The overall ergonomic score reflects a screening-based assessment of workstation setup, work habits, and environmental factors that may contribute to physical strain over time. This score is not a diagnosis and does not indicate injury or medical severity.

Scoring is weighted to prioritize areas where ergonomic risk is greatest and where targeted adjustments may provide the most benefit. A higher ergonomic score indicates stronger overall ergonomic health and fewer identified risk factors.

Clinical Interpretation

Assessment findings indicate ergonomic risk factors affecting the following domains:

- Head & Neck
- Mid & Low Back
- Work Habits

Head and neck findings are commonly associated with monitor height or distance mismatches and prolonged visual focus without postural variation.

Mid and low back findings may reflect prolonged sitting postures, chair support limitations, or limited trunk movement throughout the workday.

Work habit-related findings suggest limited postural variability, prolonged task duration, or insufficient recovery breaks during the workday.

The recommendations provided in this report are prioritized to address these contributing factors and support improved ergonomic alignment, comfort, and long-term work sustainability.

Recommended Actions

Primary setup and posture adjustments to address identified ergonomic risk factors:

Priority Setup Adjustments

- Adjust monitor height to maintain neutral head and neck alignment
- Use foot support or adjust seating height to improve lower-body positioning
- Position frequently used documents and tools within comfortable reach

Postural Habits & Reinforcement

- Position the chair and desk to support relaxed shoulders and supported posture
- Incorporate brief posture changes or microbreaks throughout the day
- Alternate sitting and standing when appropriate

Recommended Equipment Ideas & Est Cost

Item	Qty	Price	Subtotal	Link
Monitor Arm	1	\$45.00	\$45.00	View
Footrest	1	\$30.00	\$30.00	View
Document Holder	1	\$20.00	\$20.00	View

Est Total (catalog est.):

\$95.00

Estimated costs are provided for planning purposes only. Prices may vary by vendor, brand, availability, shipping, and quantity purchased. Equivalent products may be sourced from other vendors.

Why These Recommendations Help

- Monitor Arm - Improves monitor positioning and reduces neck strain.
- Footrest - Provides stable lower-body support and improves seated posture.
- Document Holder - Reduces repetitive neck flexion while reviewing documents.

This sample ergonomic assessment is intended for educational and preventative purposes only and does not constitute medical advice. If you are experiencing pain or significant discomfort, please consult a qualified healthcare professional.

Small adjustments can make a big difference in comfort and long-term health.

About ErgoEase

ErgoEase is a digital ergonomic and home safety screening platform designed to identify risk factors and provide practical, role-specific recommendations for individuals and organizations.

How ErgoEase can be used

- Individual ergonomic screening with personalized PDF reports
- Team and workplace screening with automated reporting
- Role-specific workflows across office, dental, warehouse, driving, and healthcare environments
- Home safety and aging-in-place assessments
- Custom screening solutions for unique use cases

Supported environments

- Office and desk-based work
- Dental and clinical environments
- Warehouse and industrial roles
- Driving and fleet-based work
- Healthcare and nursing
- Home safety and independent living
